### Biography

Dr. Mona El Khatib received the B.Sc. and M.Sc. degree in Biology from American University of Beirut in 2007 and 2009, respectively. She was awarded a *summa cum laude* for her Ph.D. degree in Molecular Medicine from the Department of Gastroenterology, Hepatology and Endocrinology, Hannover Medical School in 2009. Prior to joining Abdullah Gül University as a faculty in the department of molecular biology and genetics in 2015, she worked as a Postdoc at the Department of Pediatric Hematology and Oncology at Hannover Medical School, Germany. Her research focuses on understanding the ability of cancerous cells to deregulate signals and become masters of their own destiny. Her lab performs oncogenic screenings that will help to decipher the role of recently found mutations in various cancers and study the molecular mechanisms that induce cellular transformation. After which, subsequent loss-of-function studies are performed, which allows the identification of novel targeted therapy approaches that will help cure cancer. Currently the focus of her studies is on acute myeloid leukemia (AML).
